

Value across the organization

Rounds Pro empowers operators, supervisors and reliability and O&M managers with real-time, comprehensive asset health and condition monitoring. It enables team-wide collaboration to drive end-to-end reliability and maintenance efficiency.

Customers using GE Digital APM with operator rounds software show benefits in uptime, productivity and worker safety

20%

Typical availability/uptime increase

UP TO 25%

Gain in maintenance employee productivity

UP TO 40%

EHS incident reduction

Impact on daily team activities

Mobile Operators

Enhance personal productivity and program contribution

Operators efficiently take readings guided by an all-in-one app

Operators can view current and historical readings charts per asset

Discovering an issue, an operator takes photos and posts recommendations

How can I be more productive and contribute more to our operations?

BEFORE

Paper/manual tools hurt productivity and accuracy. It's difficult to evaluate readings data and initiate actions.

AFTER

A flexible mobile app enables operators to share routes, collect data, evaluate status and make recommendations.

Rounds Supervisor

Design and manage an efficient, flexible and compliant program

Scheduled routes and assignments are automatically sent to operator teams

With a single click, the supervisor updates all routes with new details

Supervisor tracks and verifies routes status and compliance in real time

How can I easily create and assign efficient routes and schedules?

BEFORE

Route definition and scheduling activities are rigid, complex and difficult to scale.

AFTER

Templates and productivity functions make route management simple and scalable.

BEFORE

Tracking, validation and compliance are manual. Running an effective program is a challenge.

AFTER

Tracking and compliance views and tools enable end-to-end program management at scale.

Reliability and O&M Managers

Drive effective reliability and maintenance programs

Reliability manager monitors complete asset health via dashboards

Noting an alert or operator notice, the manager investigates an issue

Analysis prompts manager to update maintenance plan and rounds steps

How can I use rounds data to drive reliability and maintenance programs?

BEFORE

Data is often lost, inconsistent and siloed. Data analysis and predictive maintenance are problematic.

AFTER

Data integration and rich APM functions enable complete reliability and predictive maintenance programs.

Team-wide cooperation and collaboration

Mobile operators collaborate freely to share rounds tasks and routes

Routes and details are easily updated as part of maintenance strategy changes

New/updated routes can be immediately launched for dynamic equipment conditions

New employees train using standard knowledge and best practices preserved in the application

EAM work order requests are submitted based on mobile operator recommendations

The team works together to discover and resolve issues, avoid downtime and optimize actions

GE Digital brings you the full power of a modern rounds application seamlessly integrated within an overall APM solution.
